

### APPLICATIONS:

#### Drying

Conveyors  
Drums and Containers  
Complex shaped components  
Automotive components

#### Cooling

#### Dust Removal

SECOMAK's air cannons are designed to compliment the existing range of airknives.

Powered by low pressure, high velocity air from our range of fans and blowers, they are ideal for stripping liquids and particulate matter from a variety of surfaces.

The uniquely designed cast aluminium air cannon produces a tight twisting stream of air which can provide effective stripping from surfaces up to 750mm from the exit.

They are particularly suitable for use with complex shaped components and can be easily added to existing processes and conveyors using adjustable clamps.
